Siedle iDor Series
Table-top version

All the models can be transformed quickly and simply into table-top units by mounting a table-top foot with connecting cable. The difference between the two versions reflects the requirements of ergonomics. Telephones without a monitor are positioned at an angle of 5 degrees by a plate mounted at right angles – the ideal position for a hand to grip the receiver or a finger tip to press buttons. By contrast, the colour monitors of the video versions require a greater incline to ensure optimum legibility of the display.
